

To Whom It May Concern,

I am pleased to recommend Arnav Nagzirkar, who worked under my supervision as a Software Engineering Intern at Kavodax Inc. During his time with us, Arnav consistently demonstrated strong technical proficiency, clear communication, and a collaborative, high ownership mindset that made him stand out as an exceptional intern.

At Kavodax, Arnav played a key role in the development of a secure fintech infrastructure platform, contributing across both frontend and backend systems. He approached each task with analytical precision and a proactive problem solving attitude, ensuring that deliverables were both robust and scalable. Arnav was highly dependable and showed exceptional adaptability in working with new technologies and frameworks.

He is also an excellent team player who is collaborative, articulate, and thoughtful in how he communicates and supports others. Arnav often took the initiative to coordinate development efforts, guide his peers, and ensure smooth team workflows. His ability to translate complex ideas into clear technical solutions showcased both his technical depth and communication strength.

Beyond his technical skill, Arnav displayed a strong sense of leadership, intellectual curiosity, and a growth oriented mindset. He consistently identified potential challenges early, proposed structured solutions, and delivered high quality work with minimal oversight.

I am confident that Arnav will bring the same level of excellence, collaboration, and impact to any organization he joins. He would be a tremendous asset in Software Engineering, AI and ML, or Quantitative roles, and I highly recommend him without reservation.

Please feel free to reach out to me at gharsa.amin@kavodax.com should you have any questions.

Sincerely,
Gharsa Amin
Founder and CEO, Kavodax Inc.
